

GeDiPNet Cluster 177 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 8 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-10 03:15:01. · Rows: 8 · Generated: 2026-10-10 09:41:28

| Disease                                   | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|-------------------------------------------|------------------------|-------------------------------|---------------|
| Avoidant restrictive food intake disorder | 4                      | 4                             | 1             |
| Cavitary optic disk anomaly               | 4                      | 4                             | 2             |
| Dysbetalipoproteinemia                    | 4                      | 4                             | 1             |
| Sleep disorder                            | 4                      | 4                             | 11            |
| Bile duct calculus                        | 3                      | 3                             | 4             |
| Cavitary optic disc anomalies             | 1                      | 1                             | 1             |
| Delayed sleep phase syndrome              | 1                      | 1                             | 1             |
| leukodystrophy, hypomyelinating, 16       | 1                      | 1                             | 1             |
