

GeDiPNet Cluster 184 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 8 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-07 03:15:01. · Rows: 8 · Generated: 2026-10-07 02:04:40

| Disease                                   | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|-------------------------------------------|------------------------|-------------------------------|---------------|
| Agammaglobulinemia                        | 7                      | 7                             | 13            |
| Burkitt lymphoma                          | 2                      | 2                             | 19            |
| autosomal agammaglobulinemia              | 2                      | 2                             | 1             |
| agammaglobulinemia 10, autosomal dominant | 1                      | 1                             | 1             |
| agammaglobulinemia 2, autosomal recessive | 1                      | 1                             | 1             |
| agammaglobulinemia 3, autosomal recessive | 1                      | 1                             | 1             |
| agammaglobulinemia 4, autosomal recessive | 1                      | 1                             | 1             |
| agammaglobulinemia 6, autosomal recessive | 1                      | 1                             | 1             |
