

# GeDiPNet Cluster 194 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 8 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-10 03:15:01. · Rows: 8 · Generated: 2026-10-10 05:36:18

| Disease                                    | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|--------------------------------------------|------------------------|-------------------------------|---------------|
| Atrophoderma vermiculata                   | 5                      | 5                             | 1             |
| Burnett schwartz berberian syndrome        | 5                      | 5                             | 1             |
| Tricuspid atresia                          | 5                      | 5                             | 1             |
| Common migraine                            | 4                      | 4                             | 10            |
| Keratosis follicularis spinulosa decalvans | 4                      | 4                             | 3             |
| Developmental dysplasia of the hip         | 3                      | 3                             | 14            |
| hypercholesterolemia, familial, 1          | 1                      | 1                             | 1             |
| pediatric systemic lupus erythematosus     | 1                      | 1                             | 1             |
