

GeDiPNet Cluster 249 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 7 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-07 03:15:01. · Rows: 7 · Generated: 2026-10-07 09:56:00

| Disease                                     | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|---------------------------------------------|------------------------|-------------------------------|---------------|
| Cavernous malformations of cns              | 6                      | 6                             | 8             |
| Cerebral cavernous malformation             | 6                      | 6                             | 6             |
| Congenital cerebral aneurysm                | 5                      | 5                             | 2             |
| Congenital malformation of cerebral vessels | 5                      | 5                             | 2             |
| Developmental venous anomaly                | 5                      | 5                             | 4             |
| cerebral cavernous malformation 2           | 5                      | 5                             | 1             |
| Angiokeratoma                               | 2                      | 2                             | 3             |
