

GeDiPNet Cluster 280 -- Top Shared Genes

Curated genes (disease\_gdp) linked to 2 or more of this cluster's member diseases, most widely shared first. Data as of: 2026-10-08 03:15:01. · Rows: 3 · Generated: 2026-10-08 04:18:16

| Gene | Member Diseases Linked | Cluster Size | Linked Diseases                                                                                                                                                                |
|------|------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GALE | 5                      | 7            | Erythrocyte galactose epimerase deficiency; Erythrocyte udp-galactose-4-epimerase deficiency; galactose epimerase deficiency; Galactosemia; Udp-glucose 4-epimerase deficiency |
| GALM | 2                      | 7            | Galactose mutarotase deficiency; Galactosemia                                                                                                                                  |
| GALT | 2                      | 7            | Galactosemia; Udp-glucose-hexose-1-phosphate uridylyltransferase                                                                                                               |
