

GeDiPNet Cluster 334 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 6 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-08 03:15:01. · Rows: 6 · Generated: 2026-10-08 07:30:55

| Disease                                           | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|---------------------------------------------------|------------------------|-------------------------------|---------------|
| Progressive myoclonic epilepsy                    | 5                      | 5                             | 24            |
| progressive myoclonus epilepsy                    | 4                      | 4                             | 9             |
| Myoclonus-renal failure syndrome                  | 3                      | 3                             | 1             |
| Unverricht-lundborg syndrome                      | 3                      | 3                             | 3             |
| Progressive myoclonic epilepsy with renal failure | 2                      | 2                             | 1             |
| Lafora disease                                    | 1                      | 1                             | 2             |
