

GeDiPNet Cluster 378 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 5 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-07 03:15:01. · Rows: 5 · Generated: 2026-10-07 16:44:56

| Disease                                                               | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|-----------------------------------------------------------------------|------------------------|-------------------------------|---------------|
| Cancer, alopecia, pigment dyscrasia, onychodystrophy, and keratoderma | 3                      | 3                             | 1             |
| Dyschromatosis                                                        | 3                      | 3                             | 1             |
| Dyschromatosis symmetrica hereditaria                                 | 3                      | 3                             | 3             |
| Rotator cuff tear                                                     | 3                      | 3                             | 15            |
| ADAR-related type 1 interferonopathy                                  | 0                      | 0                             | 0             |
