

GeDiPNet Cluster 407 -- Member Diseases

Cluster grouping: label propagation over disease\_related's top-5-per-disease shared-gene similarity graph. Cluster size: 5 diseases. Sorted by connections within the cluster (most central first). Connections/partners count deduplicated disease pairs; significant = FDR q 0.05. See scripts/build\_disease\_clusters.php on gedipnet.bicnirrh.res.in. Data as of: 2026-10-07 03:15:01. · Rows: 5 · Generated: 2026-10-07 05:25:20

| Disease                                                                                                  | Connections in Cluster | Significant Partners (q<0.05) | Curated Genes |
|----------------------------------------------------------------------------------------------------------|------------------------|-------------------------------|---------------|
| Autosomal dominant sensorineural deafness                                                                | 3                      | 3                             | 6             |
| Sebastian syndrome                                                                                       | 3                      | 3                             | 1             |
| macrothrombocytopenia and granulocyte inclusions with or without nephritis or sensorineural hearing loss | 3                      | 3                             | 1             |
| Renal hypertension                                                                                       | 2                      | 2                             | 7             |
| Hearing loss with hypertrophic cardiomyopathy                                                            | 1                      | 1                             | 1             |
